Open-Sided Pipe Vise

A must-have item for your oil field maintenance and tool servicing

Completion Tools

Open-Side Pipe

Vise is a must-have tool for the shop, warehouse, or in the field. This rugged screw-type vise holds a variety of tools, tubing, and valves.

Applications

- Assembly, maintenance and servicing oil tools
- Fixing and holding applications

Features and Benefits

- Holds up to 11 5/8" (295 mm) diameter
- Rugged design and construction
- Easy to use
- Design allows the tool to be used with a wide range of tubing, pipe and casing sizes
- Safe to use
- Reliable to use

This Open-Side Pipe Vise is ruggedly built for years of heavy use. The heavy, cast-steel body is built to last. The tool can hold up to 11 5/8" (295 mm) diameter items.

The **Open-Side Pipe Vise** is easy to use. The counterbalanced handle can be rotated into position and quickly extended for extra leverage. The vise provides many features that are superior to using a chain vise for many applications. This single vise takes the place of the usual combination of vises generally required to cover a comparable range.

The Open-Side Pipe Vise design can be used with a wide range of tubing, drillpipe, and casing sizes, plus those hard-to-hold items such as manifold fittings, valves, and more.

The Open-Side Pipe Vise is safe to use with positive grip that minimizes complicated balancing that must be done with other methods.
